

## NEW CABIN BOAT

**Angler Boats is a Durban based family business which specialise in fibre glass boats for the fisherman. Almost every aspect of angling is covered and boats range through car-toppers, runabouts for bays, lakes, estuaries etc, ski-boats and cabin boats.**

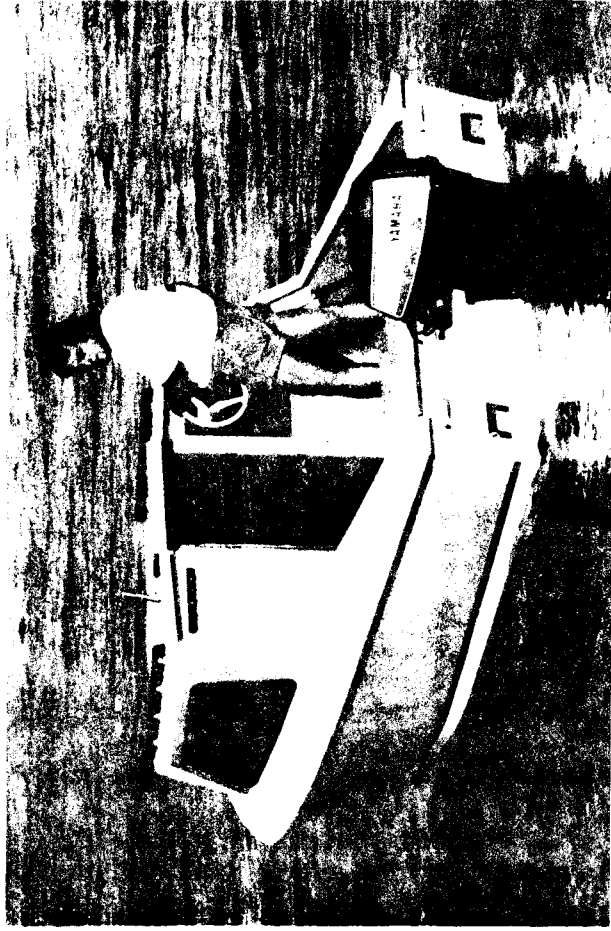

All have been designed and developed specifically for the discerning fisherman who wants the highest quality and finish together with those little extras.

After two years of concentration on design and development their present range is now complete with the latest addition having only just completed its trials and testing.

This latest addition is a 15ft. cabin boat which should catch the eye of the fisherman who is prepared to pay that little extra for a boat which is most definitely above average in every respect.

The sportsman has been catered for in every respect with standard features that make life just that little bit more comfortable and worthwhile. The cabin sleeps two adults in utmost comfort with full upholstery of all bunks, and carpeting, being of the best quality.

Under-bunk storage is exceptionally large and will hold all gear necessary for that extended trip. Drinks cabinet is standard equipment as are tinted windows and front of cabin hatch for easy access to forward anchor hatch as well as through ventilation. Louvre cabin door is secured from either inside the cabin or out and steering and control cables are all concealed behind double bulkheads.

The open aft deck is fully carpeted and storage space in this area includes cubby holes in side panels, fuel tank hatch for two tanks and live bait hatch. After deck is self draining with drain flaps that can be secured and may only need opening in the roughest of conditions as this boat is exceptionally dry.

Well designed rod racks are standard equipment and keep rods not only tidy but out of harms way. Broad gunwhales together with a cabin top rail make for easy walking around the cabin. All fittings are both comprehensive and of the highest quality. Although this boat is large for a 15 footer and very solidly built, the tests done on Durban Bay proved that she is capable of 35 m.p.h. powered by the 55 h.p. Yamaha test model.

The motor performed exceptionally well and motors from this range could range from their 40 h.p. to 85 h.p. with absolute safety. The choice depends on the buyer's pocket and requirements. Trailers are available from the manufacturers.

These trailers are once again comprehensively fitted with everything necessary and the fact that they are of a 'break-back' design makes it easy work for one person to handle the boat on and off the trailer even in fairly shallow water. The trailer does not even have to be uncoupled from the tow vehicle.

Altogether the outfit is one which would give any fisherman both pride of ownership as well as a means to pursue his favourite pastime in comfort and safety. The same hull has been used on a ski-boat model and details are available from Angler Boats, P.O. Box 12041, Jacobs, 4026 or phone Durban 484055. (See advert in this issue.)
